REGISTER NOW

The Fueling the Future with Renewable Gases event offers a unique opportunity to initiate and establish new international collaborations in the fields of hydrogen, fuel cells, electrolysis, gasification, smart grids, innovative mobility, compression and energy storage solutions.

We'll bring together business, research and government who are active in, and dealing with the challenges related to renewable gas in the energy transition. Participants from multiple European countries will be present.

The key focus of this matchmaking event is centered around the [Living Labs concept](#). For this event two Living Labs with multiple [innovation challenges](#) present themselves:

1. [The Living Lab in Hoogeveen](#): aims to deliver a (techno-economic) blueprint and corresponding technologies for the heat supply of 80 houses in Nijstad-Oost on 100% hydrogen (H₂), based on operating with a hydrogen central heating boiler.
2. [The Living Lab in Alkmaar](#): aims to develop and market innovations in the chain of biomass gasification and to develop a blueprint for liquefied hydrogen in the transport sector, from production to end user.

Participate to get in direct contact with the project developers of both Living Labs and pitch your innovative solutions during the workshops or in one-on-one B2B meetings.

The matchmaking event offers you:

- The opportunity to initiate new partnerships with international companies, research institutions and governmental authorities active on the theme of renewable gases (biogas, green gas, hydrogen, gasification)
- To get involved with innovative project developments
- Meet international experts in your field of interest
